

# PlugPART 5110 Feedthrough sealing system

PlugPART 5110 is a multi-component fire barrier complex, used for sealing of electrical, mechanical crossings, blank and mixed on walls or slabs

This complex makes it possible to treat crossings and electrical ducts, mechanical or blank of any crossings on walls and slabs with a high level of saturation of feedthroughs and congested configurations

## Key benefits

- Easy to use
- No need to remove the existing protection or product (no waste to be treated), especially where asbestos is present
- One-sided installation
- Repairable, watertight, washable, lightweight system, flexible, can be adapted directly to all hoppers
- The system can be compressed if the space to be protected is small

## Performance

- Fire resistance: up to EI 120 (CF 2h00).

## Application

- Application on the surface or inside the crossing/installation on safe crossings security feedthroughs
- The PlugPART 5110 system is installed manually.

## Key points

EI 120

↪ *Fire resistant*

M0

↪ *Non-flammable*

Flexible

↪ *Fits all hoppers*
