

NuFLS 5110 Subtraction of heat load

NuFLS 5110 is a flexible protection, which aims to reduce the heat load of a fire volume. This protection allows the heat load of a set of cables to be subtracted and avoid the aggravation in the event of a fire, thus safeguarding the surrounding technical equipment

Key benefits

- Flexible protection
- Adaptable to the environment, compression possible
- Repairable

Performances

- Seismic resistance
- Splash-proof
- Resistant to water and aggressive liquids according to EN ISO 2812
- Decontaminable

Technical Data

- Qualification according to EDF protocol (configuration, type of cables type of shelf etc.) and the test procedure of standard EN 1366-11
- Weight: 8,7kg/m²

Application

- Manual installation
- A space of 150 mm around the cable tray is recommended for installation
- DIB waste
