

TemPART Refrideration / Freezing of floors

TemPART is a heat transfer fluid used for application such as reffridgeration, freezing....

Ready to use, non toxic and non polluting

Does not contain glycol, amine or nitrite

Benefits

- Ready-to-use solution that does not need to be diluted
- Available in several versions whose designation reflects the lowest recommended temperature in use before freezing
- ↳ Example :
"TemPART-10" for a usage of up to -10°C recommandé
- Low viscosity.

Soil consolidation
used in civil
engineering

Utilisation

- Carry out a thorough cleaning system before filling with TemPART.
- Use TemPART in a closed circuit so as not to change its composition by evaporation and thus guarantee its range of use.

Special features

- Packaged in 30L plastic container or 200L barrels
- Store in a dry place between 10 & 30°C.
